JEMS General Risk Assessment – Craft & Trade

JEMS General RAMS – Risk Assessment - Principles of completion - Using the guidelines suggested below, please consider what risks there are to those people setting up/dismantling, manning and members of the public attending your stand.
Hazard - Look for hazards which you could expect to result in significant harm under the conditions of the event. Examples *Slipping & tripping *Electricity/Power supplies *Dust *Fumes *Manual Handling *Noise *Poor lighting *Wet weather/grounds *Rubbish/waste materials *storage of stock items
Who is at risk? List groups of people that may be affected. Examples *Yourself *People sharing your area *Other traders/exhibitors *Members of the public
Control measures to minimise the risk. What control measures are in place to prevent the hazard you have Identified? Eg.*Represent good practice *Reduce the risk as reasonably possible *Ensure adequate information, instruction or training procedures *If so, then risks are adequately controlled, but you need to indicate the precautions you have taken.
Upgraded Control Measures, What more could you reasonably do for those risks which were not adequately controlled? You will need to prioritise those risks that may affect large numbers of people or could result in serious harm such as Life Changing Injury. Principles for further action *Remove risk completely *Try a less risky option *Prevent access to the hazard * Reduce to an Acceptable Level.

What is the Hazard? (Something that has potential to cause harm)	What is the current risk rating? (Likelihood of harm happening) Low – Medium - High	Who is at risk?	Current control measures	Upgraded control measures	Your new risk rating? Low – Medium - High
